Individual customer solutions from SOBAtec GmbH

The product range of SOBAtec GmbH extends across the entire maintenance and repair chain of rail-bound vehicles and vehicles in local public transport (such as buses, electric trains, trams and subways). Systems are developed, manufactured and delivered individually to the customer. The projects include individual machines, combined systems or complete maintenance plants.

Working platforms

Machines and systems that serve as an elevated standing, working and movement area for workshop personnel

Inspection machines

Stations where rail vehicle parts are tested for their target properties

Workshop-equipment

Robust machines and Robuste systems for production, inspection and repair of buses, train and trams.

Assembly Systems

Machines that remove pieces from conveyor lines, feed them to other system parts and position them

SOBAtec has more than 20 years of industry experience, combined with in-depth specialist knowledge in various maintenance processes.

Our systems are supplemented, for example, by crane systems for handling heavy loads in the roof area. Our project scope also includes dismantling of old systems, planning support or the fundamental overhaul of existing systems.

Service from SOBAtec GmbH

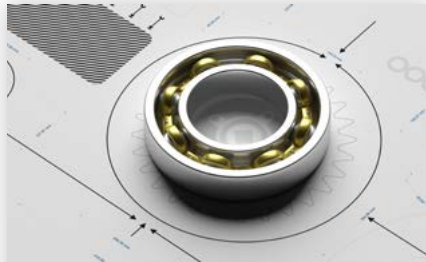

SOBAtec offers individual services for efficient system operation in your workshops and factories.

The focus is on maximum system availability, optimal work processes and employee safety. SOBAtec has a strong service team that works onsite or remotely for customers.

Maintenance and inspections

e.g. annual inspection according to manufacturer specifications

Original spare parts

according to manufacturer quality standards

Maintenance contracts

Coordinated content for the optimal use of your system, e.g. spare parts packages, inspection budget, and much more. including cost security

Remote maintenance

Error analysis, software updates, process improvement, etc.

Repairs and retrofits

e.g. B. Repairs in the event of damage as well as retrofits in the form of software updates, technical modifications or extensions

Training

Training on technical changes, innovations, and much more. with the aim of increasing efficiency in maintenance processes and avoiding errors.

SOBAtec GmbH was founded by the four founders in 2000 based on their long-standing railway tradition and is based in Kamenz, Saxony, near the state capital Dresden

SOBAtec developed from an engineering supplier to a provider of complete systems with its own development of hardware and software, assembly and extensive service coverage.

The integration of new technologies enables us to implement simple, clear and innovative solutions for our customers and their requirements in close collaboration with leading research institutions and experienced industry experts.

Intelligent Solutions for Industry.

over 20 years of experience

over 150 Systems delivered

over 12 km of roof work platforms installed in Europe
